Stripe is outside sniffing the air. “Hey, something smells great!” he says. Smoke is coming from next door. “I’m hungry!” Stripe licks his lips and starts jumping up and down.

THINK

What could be the reason for the smoke next door?

Barbecool!

How do you check the temperature of your barbecue without a thermometer? If you can keep your hand over a barbecue grill for 5 to 7 seconds, the temperature is around 180~230 °C. If you can only manage 2 to 4 seconds, it's more like 240~290 °C.

According to experts, the perfect temperature for chicken is 73 °C, and sausages roast just right at 65 °C.
